

Product Warranty

All products carry a 12 month warranty from faulty materials and workmanship in domestic situations and 3 months commercial use.

In the unlikely event that a product is faulty, Farmweld will replace or repair it at its sole discretion. Any warranty claim should be made directly in consultation with our office. Should a product need to be sent back to our yard, it will only be accepted with a prior authority and return number. All freight must be prepaid.

Why choose Farmweld for your horse products?

Our horse products are custom designed and made keeping safety and your needs and budget in mind.

Horses can be tough on gates and fencing, and with their natural flight response it's important to remove potential hazards which may result in injury to themselves and others.

Farmweld custom makes all horse panels and gates as every horse owner has their own ideas about how their horse should be contained and the types of yard that they need. It might be a portable float-yard a yearling/foal yard which requires finer mesh, a yard for miniatures or a round yard with outward sloping panels. To this end all of our horse products are made in consultation with the horse-person and to their individual specifications with the end product guaranteed to satisfy.

The Manufacturing Process ...

Farmweld products are constructed from quality hot dipped galvanised pipe. Horses are heavy animals which can put a lot of stress on yards and gates. Because of this we accurately measure and take the extra time to notch all the welded joints. This is done to provide a cleaner looking and stronger joint with double the welds of conventional squashed joints. Loads are distributed more widely and evenly within the structure and also provides a smoother joint with less chance of animals catching on protrusions.

Notched joint prior to weld-

Once the panels have been MIG welded all of the joints are wire brushed to remove weld residue and spatter and then painted with 'cold galv' to prevent

corrosion.

Panels with mesh inserts are securely welded, not just tacked, so impact will not result in the mesh unzipping from the frame. We use a 50x75mm mesh for horses and ensure that it is inserted 'inside' the frame so there are no sharp edges to cut you or your horse.

The fittings and caps used are all quality hot dipped galvanised items from reputable suppliers.

What options are there?

When designing yards the wall thickness and diameter of the rails can be varied, as well as the length and height of the rails. Yards can be made fixed or with portable panels.

Fixed Miniature Pony Yards

Panels can be made square and not bent on the corners, an added safety feature which minimises the risk of injury to animals who on occasion attempt to jump over fences. This design feature avoids animals wedging their legs between panels which can result in injury or death to your horse.

Portable Panels—Dreamtime Park Stud, Vic. used with stallions & foals. Panels can be reconfigured to double as a round yard
